

# Doing business abroad safely

## Dyami Strategic Security enables your organisation to thrive internationally

### Doing business abroad

Bringing your innovative vision to life is what gives you energy and motivation. Doing so internationally even more so. Worrying about threats and risks probably does not.

Our mission at Dyami is to free you from worry about these threats and risks and let you focus on what you do best. We use our wealth of expertise to support your organisation with tailor-made service and at exceptionally cost-effective rates.

International business provides many opportunities, but there are also inherent risks:

- Physical distance increases reaction times
- Less awareness of local threats
- Duty of care: your responsibility for the safety and wellbeing of your people becomes more complex
- Protecting your intellectual property (IP), people and assets is much more difficult
- Assessing the intentions and background of potential partners, suppliers and employees is much more difficult

Protecting the assets of your organisation is crucial, especially abroad. This is true for your people, your IP and sensitive data and your physical assets such as facilities and equipment.

Dyami provides you with full support, including duty of care. This enables you to do business successfully and safely.

### Focus on opportunities and growth

As an ambitious organization, you are focused on seizing opportunities and growing your business. This does not really match the language of traditional security companies, who focus on the negative aspects of doing business.

At Dyami, we also focus on enabling you to do business successfully and safely, besides taking care of safeguarding you against those negative aspects. Our approach is at the strategic level, in the early stages of new plans and opportunities.

An example of strategic security: You'd like to do business in a country where the local safety situation is less than ideal. You decide not to go forward with your plans. Or you do go forward, and things go wrong. Either way, missed opportunity. By involving Dyami at an early stage, we analyse the situation and make a plan for you to do business successfully and safely.

Dyami is a young and ambitious security provider with many years of experience in Intelligence, Defence, Government, Law Enforcement, Cyber Security, Travel Industry and Aviation Security.

Our in-house analysts continuously analyse worldwide threats and conflicts.

Our team of experts in all fields allows us to provide a total security solution. From cyber security to personnel training, in-depth threat assessments and due diligence to physical security in global conflict zones.

## Worldwide local threat assessments

When doing business abroad, you need to be certain that your specific location is safe enough. But make no mistake: no place on earth is 100% safe.

Dyami's in-house team of specialised analysts use real-time intelligence to monitor existing and emerging conflicts worldwide. We also make very specific threat assessments for our clients, for any place on earth, whether it's on another continent or a European city where there is brewing social unrest.

Our threat assessment reports are extremely detailed and specific but also easy to read. They are designed to give you all the insights you need in order to make big and quick decisions.

These reports contain subjects such as:

- (geo)political situation
- ethnic conflicts
- social unrest
- crime and corruption
- terrorism and violence
- espionage
- cultural aspects
- health risks (including COVID-19)

We also provide real-time alerts when threat levels at relevant locations increase, usually before threat levels become critical. This allows you to anticipate more and take action when needed.

Should a situation abroad become very unsafe, we can provide physical protection and evacuation for your people and assets.

## Know who you do business with

It can be difficult to know who to trust in business, especially abroad. This concerns potential clients, new partners, new suppliers and even new employees.

Dyami can help by providing investigative analyses and risk analyses. We can also provide experts in the field of interrogation that can help assessing important contact moments and conversations. They can observe from a distance or actively participate.

## IP safeguarding

For many organisations, their IP and sensitive data are crucial to their existence. Innovative companies are at risk of espionage, data and IP-theft. Competitors and foreign regimes are actively at work right now trying to get their hands-on valuable IP across all sectors.

It is crucial to know that **cyber security protection alone is not enough** to keep your IP and data safe. We regularly see espionage in many different forms:

- bugging of offices, facilities, cars, homes
- intercepting network data (including unsafe Wi-Fi)
- theft or breach of smartphones and laptops
- infiltration of organisations (insider threat)
- coercion, theft, threatening of employees

Only focusing on cyber security is like creating a secure Wi-Fi network at home but leaving your front door open!

IP safeguarding is part of Dyami Corporate Asset Protection.

## Dyami Corporate Asset Protection

- design of a thorough security policy and procedures
- design of an Emergency Response Plan
- cyber security
- surveillance countermeasures (bug sweeping) and counterespionage
- awareness and security training for personnel
- due diligence of potential partners, suppliers, clients and personnel
- physical protection of people and assets
- tailor-made threat and risk assessment reports
- safety and security during travel and transportation
- 24/7 emergency incident response

## Your own security department

We know that every euro or dollar can be spent only once. That is why we offer several subscriptions with varying levels of service at very competitive rates.

For the price less than that of a dedicated full-time security officer, you have the entire Dyami team at your disposal. Consider us your own security department!
